Vibra

Jacqueline Esbach Theresa Brand
Jolina Mumbela

Vibra is a **drum machine** that makes music **accessible** to everyone, especially for deaf individuals or people with hearing difficulties. It's also perfect for **beginners**, thanks to its **simple** and **playful** design. Users can create loops, edit drum patterns, and make their own samples. Each **sound** is also turned into **vibrations**, letting users physically experience the music. Because Vibra is **small** and **portable**, you can take it **anywhere** and make music on the go.
